Title of the Article with Capital Letters on Main Words

Firstname Lastname[1] and Prénom Nom[2]

[1] EPITA, [2] Université de technologie de Troyes

Abstract

The abstract should be a brief summary of the significant items of the paper. It should be informative and not only present the general scope of the paper but also indicate the main results. It should contain 150-200 words.

Authors should remember that online systems rely on the title and abstract to identify articles in electronic bibliographic databases and search engines. They should therefore take great care in preparing these elements.

Keywords: botnet, network, IDS.

1   Introduction

This document is a template for LaTeX. Please donwload the latest version from the journal website (https://journal.cecyf.fr/authors). If you would prefer to use Word, please download the Word template instead, but we do prefer LaTeX.

The introduction is supposed [1] to present the structure [2] of the paper.

This particular template is meant for English papers. To switch to French, one simply needs to update the options of the `babel` package to `french` instead of `english`.

The current structure of this sample paper is only a suggestion for the sections that are needed in a scientific paper:

- Introduction
- Description of the problem and possible solutions
- The implementation experimented and its evaluation
- Discussion on the results
- Related work
- Future work
- Conclusion

Feel free to choose a different structure, should you feel it is better adapted to your specific problem.

For legal papers, you will need to adapt to your specific situation and academic standards.

2   Problem and possible solutions

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest gefburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

2.1   Sub section on the describing the problem

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest gefburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it

should be written in of the original language. There is no need for special content, but the length of words should match the language.
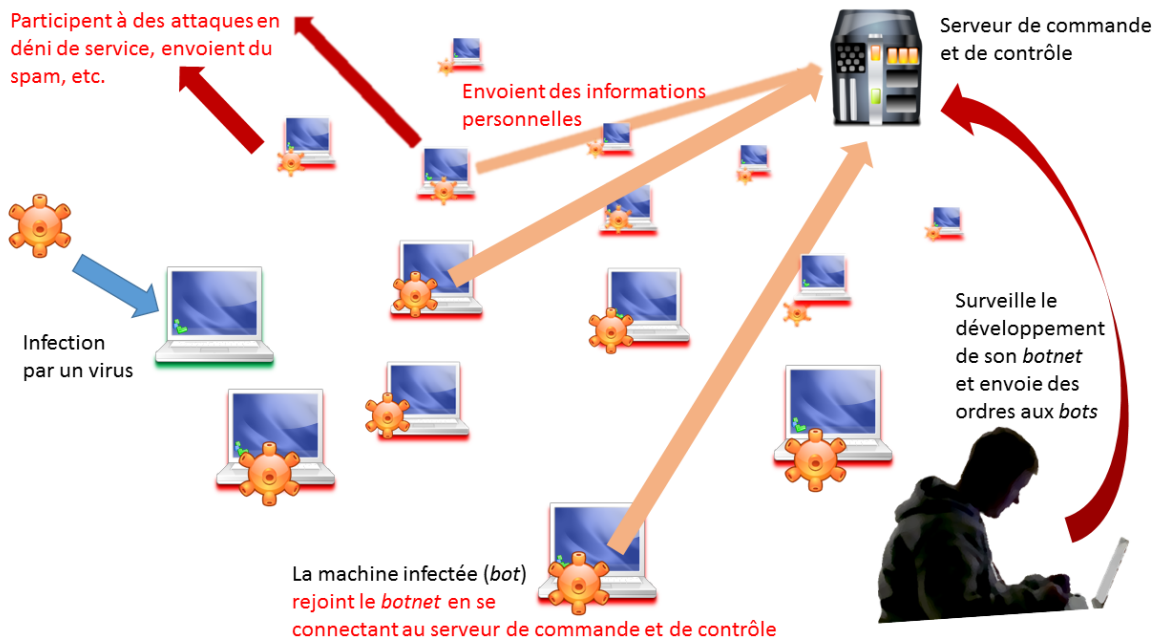

2.2 Figures and tables

Figure 1: Example of a fullwidth figure

Figures should be clear, easy to read and of good quality. All figures must be mentioned in the text in consecutive order and be numbered with Arabic numerals. To insert full width pictures you need to interrupt the columning in place, such as Figure 1.

If you want to insert a smaller picture, inside one of the columns, it is simply necessary to insert that figure in place (not forgetting the [H] option, as floats are not allowed inside the multicolumn system, like with Fig. 2.

When preparing figures for CybIN, please choose one of the following fonts: Helvetica, Arial or Roboto.

When referencing figures within your paper, please use the abbreviation "Fig.".

Figure 2: Example of a smaller figure directly inside a column.

Moreover, it is also possible to insert tables inside columns, like Table 1

Number Tables with Arabic numerals. Do note abbreviate "Table."

colonne 1	colonne 2	colonne 3
1.1	1.2	1.3
2.1	2.2	2.3

Table 1: Example of a small table inserted in a column.

3 Implementation and evaluation

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest gefburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.
